

EQRx Launches to Create Innovative Medicines at Dramatically Lower Prices for People, Healthcare Systems and Society

Bolstered with \$200M Series A Financing, EQRx Brings Blue-Chip Investors and Life Sciences Leaders Together to Re-Make the Business of Drug Discovery, Development and Delivery to Patients

Led by Alexis Borisy as Chairman and CEO and Melanie Nallicheri as President and COO

EMBARGOED UNTIL January 13, 2020, Cambridge, Mass.– EQRx announced today that it is launching to create novel, patent-protected medicines at prices that are more affordable for people and sustainable for healthcare systems. EQRx, a first of its kind biotechnology company, is focused on re-engineering the process from drug discovery to patient delivery with the goal of offering a market-based solution for the rising cost of medicines. Leveraging advances in science and technology to bring treatments for life threatening and chronic diseases to people more efficiently and cost-effectively, EQRx intends to offer its therapies at dramatically lower prices compared to today’s innovative medicines.

“Over the last several decades, society has benefited from unprecedented technological advances and a deeper understanding of disease biology, revolutionizing the way many diseases are treated today. That said, the pricing of new therapeutic approaches is pushing beyond the limits of common sense, preventing people and society from equally benefiting from innovation,” said Alexis Borisy, chairman and chief executive officer of EQRx. “The time is now for a market-based solution to rising drug costs. Our blue-chip team of founders and leaders is proud to launch EQRx and to lead the way in redefining what it means to innovate and deliver high-quality medicines that are within reach of people through more equitable prices.”

“The process of developing and bringing new drugs to market should and can be organized towards the goal of their being affordable both for patients and society,” said Peter Bach, MD, co-founder of EQRx and director of the Center for Health Policy and Outcomes, Memorial Sloan Kettering Cancer Center. “Today even people with insurance are delaying filling prescriptions or going without due to the high cost sharing that is ‘part and parcel’ of high drug prices. New approaches are needed. EQRx aims to create affordable new medicines that are priced for access, and accessibility is the critical attribute for every medicine if it is going to improve people’s health.”

Series A Funding

EQRx is launching with \$200 million in Series A financing led by GV, ARCH Venture Partners, and Andreessen Horowitz, with participation from Casdin Capital, Section 32, Nextech, and Arboretum Ventures, among others.

“The bold mission of EQRx to deliver better medicines at lower prices is one that can redefine the therapeutics landscape,” said Krishna Yeshwant, MD, general partner, GV. “The company’s business

model will deliver a sustainable approach for creating, reinvesting in, and rewarding therapeutics innovation, while ensuring these new medicines are broadly accessible to people and healthcare systems through dramatically lower pricing.”

Expert Team of Founders and Leaders

EQRx has assembled a team of life sciences enterprise leaders including:

- Alexis Borisy, a leading biotechnology entrepreneur and investor, as chairman and chief executive officer;
- Melanie Nallicheri, former chief business officer and head of Biopharma for Foundation Medicine and senior vice president at McKesson Distribution Solutions, as president and chief operating officer;
- Robert Forrester, former chief executive officer of Verastem Oncology, as CXO;
- Susan Hager, former senior vice president of corporate communications, government affairs and advocacy at Foundation Medicine, as chief communications officer and senior vice president, corporate Affairs & citizenship;
- Peter Bach, MD, director of the Center for Health Policy and Outcomes, Memorial Sloan Kettering Cancer Center, as co-founder and advisor; and,
- Sandra Horning, MD, former executive vice president, chief medical officer and global head product development, Genentech/Roche, as co-founder and advisor.

About EQRx

EQRx is committed to making innovative medicines at dramatically lower prices for the benefit of people and society. By bringing together stakeholders from across the healthcare system and utilizing the latest advances in science and technology, the company seeks to discover, develop and deliver high-quality, patent-protected medicines more efficiently and cost-effectively than ever before. Headquartered in Cambridge, Massachusetts, the company is backed by GV, ARCH Venture Partners, Andreessen Horowitz, Casdin Capital, Section 32, Nextech, and Arboretum Ventures.
